# Phoenix

TIA-0001

Phoenix is Ryan [REDACTED] older brother. Phoenix knows how to use IP loggers and DoSing tools like [REDACTED]. After Phoenix sent a screenshot in General in Ben's Server of 4 people in Private VC. When he doesn't have any access to Private VC. After trying to ask him how he got it, he disregarded using Vencord. After further attempts to try to get him to tell how he did, he would never tell us. After getting in contact with Ryan [REDACTED] he said the Phoenix said that 'he has something up his sleeve'. After figuring this out, The TIAS Council locks down the servers as well as Bens Server. After getting worse the servers went into a special kind of Code Black. Code Black-002, [REDACTED] This code black was used to further lockdown the servers. While Bens Server remained in Code Red.

## How To Contain

[REDACTED]
